Getting started quiz

Summary

Getting started quiz

Bookmark this page

This quiz covers the concepts and skills from this section. The first part tests your knowledge of the n8n canvas, triggers, and how workflows execute. The second part is based on the **Nathans workflow** workflow you built during this section, so make sure you have completed and passed the workflow checkpoint before starting.

Hint: Some questions have may more than one correct answer.

Question 1

0.0/1.0 point (graded)

Which of the following are Core Nodes?

- [ ] Schedule node
- [ ] Telegram node
- [ ] IF node
- [x] Webhook node

✖

Submit You have used 3 of 3 attempts

Question 2

1.0/1.0 point (graded)

Where do you get credentials for app/service nodes?

- ( ) In the n8n documentation
- (•) From the respective app/service you want to use
- ( ) From the dark web
- ( ) I don't need credentials

✔

Submit You have used 1 of 3 attempts

Question 3

1.0/1.0 point (graded)

You can download your workflows as .exe files.

- ( ) True

True

False

Submit You have used 1 of 3 attempts

Question 4

1.0/1.0 point (graded)

You can import a workflow from a URL or from a local JSON file?

True

False

Submit You have used 1 of 3 attempts

Question 5

1.0/1.0 point (graded)

What programming language can you use in the Code node?

JavaScript

TypeScript

Python

Any programming language

Submit You have used 1 of 3 attempts

Question 6

1.0/1.0 point (graded)

When executing the Code node, you might get an error "Error: Code doesn't return items properly". What is the reason for this error?

The code in the Code node doesn't return the data in the correct structure.

The Code node doesn't receive any incoming data.

The node needs credentials.

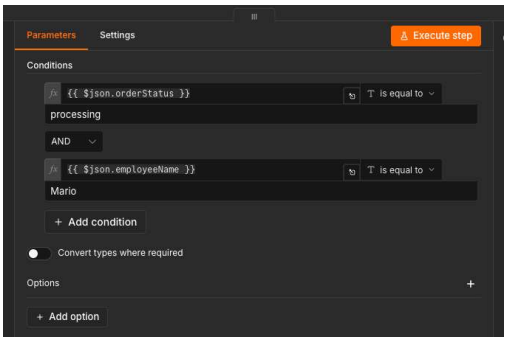

Submit You have used 2 of 3 attempts

In this part of the quiz, you will modify Nathan's workflow to test your understanding of the concepts you've learned. You will change some node parameters and functions, then answer questions about the new results. Make sure you attempt the questions in sequence, as each one builds on the previous change.

Before you begin, make sure **Nathan's workflow is open in your Editor UI** and that all nodes are working correctly.

For these questions, you will need to add a **second condition** to the If node to further filter the data. Currently, the If node filters orders by status (processing). You're going to add another condition so it also filters by a specific employee name.

Add a second condition to filter the orders assigned to the employee named **Mario**, in the same IF node.

Question 1

1.0/1.0 point (graded)

When adding the second condition to filter by employee name, which data type should you select for the comparison?

- ○ Number
- ○ Boolean
- ○ Date & Time
- ◉ String

Submit You have used 1 of 3 attempts

Question 2

1.0/1.0 point (graded)

Which expression should you use in Value 1 for the employee name condition?

- ○ {{ $json.Mario }}
- ◉ {{ $json.employeeName }}
- ○ {{ $json.orderStatus }}
- ○ {{ $json.employeeName.Mario }}

✔

Submit You have used 1 of 3 attempts

Question 3

1.0/1.0 point (graded)

What value should you enter in Value 2 for the employee name condition?

- ○ {{ $json.employeeName }}
- ○ employeeName
- ◉ Mario
- ○ {{ $json.Mario }}

✔

Submit You have used 2 of 3 attempts

Question 4

1.0/1.0 point (graded)

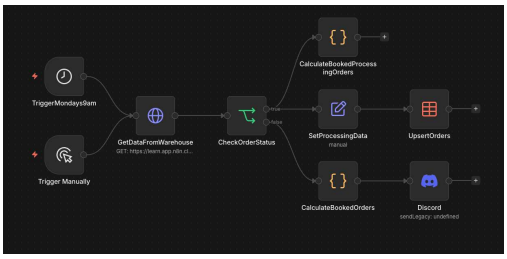

Why did we add the second condition inside the same If node instead of adding a new If node?

- ○ n8n only allows one If node per workflow
- ○ A second If node would override the first one's results
- ○ Adding a second If node would cause the workflow to fail
- ◉ Both conditions need to be true for the same item

✔

Submit You have used 1 of 3 attempts

Duplicate the **CalculateBookedOrders** node, rename it to **CalculateBookedProcessingOrders**, move it above the true branch, and connect it to the true output of the CheckOrderStatus node. Your workflow should now look like the below workflow.

Execute the workflow and inspect the output of each Code node to answer the following questions.

Question 5

0.0/1.0 point (graded)

What is the value of `totalBooked` returned by the **CalculateBookedProcessingOrders** node?

1 ✖

1

Submit You have used 3 of 3 attempts

Question 6

1.0/1.0 point (graded)

What is the value of `bookedSum` returned by the **CalculateBookedProcessingOrders** node?

699.87 ✔

699.87

Submit You have used 1 of 3 attempts

Question 7

1.0/1.0 point (graded)

What is the value of `totalBooked` returned by the **CalculateBookedOrders** node?

25 ✔

25

Submit You have used 1 of 3 attempts

Question 8

1.0/1.0 point (graded)

What is the value of `bookedSum` returned by the **CalculateBookedOrders** node?

2944.8799999999997 ✔

2944.8799999999997

Submit You have used 1 of 3 attempts

Question 9

1.0/1.0 point (graded)

What do the new results from the CalculateBookedOrders node (false branch) represent?

- ○ All booked orders only
- ○ All orders not assigned to Mario regardless of status
- ◉ All orders except processing orders assigned to Mario
- ○ Only processing orders assigned to employees other than Mario

✔
